This receptor is capable of binding to the vascular endothelial cell growth factor, VEGF and is used in a screening assay which identifies compounds that inhibit vEGF action on KDR. Such compounds which inhibit binding of VEGF to the KDR may inhibit angiogenesis and thus be useful for treating cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     218 ICAIGAAIGITICCCIGCAAGAIICAGGCACCIAIGCCIGCAGAGGCAGGAAIGIAIACA 277

                                                                                                                                                                                                                                                                                                                                                                                The present sequence encodes murine foetal liver kinase 1 (flk-1), a protein tyrosine kinase. Isolated antibodies, pref. monoclonal, raised against the extracellular portion of flk-1 can be used to assay for flk receptors on the surface of haematopoietic etem cells, and to isolate positive cells. The antibodies can also be used as, or to obtain ligands, which stimulate the proliferation and/or differentiation of stem cells. The ligands can be used, e.g. for treating anaemia, or bone marrow damage resulting from cancer

                                                                                                                                                                                                                                                                                                                                                                                                    8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention describes a novel method of isolating cells expressing fetal liver kinse 1 (flk-1) receptors on their surface and comprises binding the cells to a polyclonal or monoclonal antibody specific to the Firk-1 receptor and isolating the cells that have bound to the antibody. The method can be used to isolate hematopoietic stem cells in any mammal but preferrably a rat, mouse, rabbit or human. The proteins of the invention belong to the receptor protein family. This sequence encodes the murine flk-1 protein which is used in the method of the

                                                                                                                                                                                                                                         Nucleic acid sequences coding for murine flk-2 and specified subfragments of it are claimed. The murine flk-1 coding sequence (i.e. AAOSSO4) is also disclosed. The flk polypeptides are receptor protein tyrosine kinases which are expressed only in primitive hematopoletic cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Score 708.4; DB 14; Length 5406;

This sequence encodes a human receptor protein tyrosine kinase which elengst to a new functional class of protein tyrosine kinase (prks). Elengst to a new functional class of protein tyrosine kinases (prks). Elever, this prk is not in the same class as flk-2. Prks in the same class as flk-2 are expressed in primitive mammalian hematopoietic elents but not in mature hematopoietic cells (mHC). This gene is expressed in more mature hematopoietic cells. The protein encoded by this sequence is an example of a receptor prk and is called fetal liver splean. It is to accompanied to the control of the contro

                                                                                                                                                                                                                                                                                                                                                                                         liver kinase) receptor protein-tyrosine-kinase. Flk1 is expressed in both primitive and mature hematopoietic cells, and in other tissues. The gene product is useful in isolation of receptor ligands, which have applications in diagnosis of bone marrow disorders and in stimulating proliferation and/or differentiation of primitive hematopoietic stem cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       441 CAACCACAAAATACAACAAGAGCCTGGAATTATTTTAGGACCAGGAAGCAGCACGCTGTT

First strand obna was primed with a primer [5' GAGAGAGAGCGCCCCAACTCCGACTTITTITTITTITTITUM 3'], cbna was primer prepared by using trehalore thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. cbna went through one round of normalization to Rot = 5.0. Second strand cDNA was prepared with the primer adapter of sequence [5'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Submitted (10-JUL-2000) Yoshihide Hayashizaki, The Institute or Physical and Chemical Research (RIKEN), Laboratory for Genore Exploration Research (GOUD, RIKEN GENOMIC Sciences Center (GSZ), RIKEN Yokohama Institute, 1-7-22 Suchiro-cho, Isutumi-ku, Yokofama, Kanagawa 20-0045, Japan (E-mail:genome-reségso.riken.go.jp, UKL:http://genome.gsc.riken.go.jp, rel:81-45-503-9212,

Cells or adult marrow or brain cells. The PCR primers used are based on known sections of the flk.1 gene. The murine flk.1 clone may be used in a vector to transform haematopoietic cells. The thymidine kinase encoded by fix.1 is expressed in primative but not mature haematapoietic cells. Ligand binding to the TK may be prepd. which haematapoietic cells in Vivo. The ligands can stimulate proliferation and/or differentiation of primative haematapoietic cells in Vivo. The ligands can stimulate the proliferational primitive stem cells, differentiation into

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         fetal liver kinase 1 (flx.1) receptors on their surface and comprises binding the cells to a polyclonal or monoclonal antibody specific to the Kix-1 receptor and isolating the cells that have bound to the antibody. The method can be used to isolate hematopoletic stem cells in any mammal but preferably a rat, mouse, rabbit or human. The proteins of the invention belong to the receptor protein family. This sequence encodes the murine fix-1 protein which is used in the method of the

This sequence encodes a human receptor protein tyrosine kinase which belongs to a new functional class of protein tyrosine kinases (pTKS). However, this pTK is not in the same class as fik-2. pTKS in the same class as fik-2. pTKS in the same class as fik-2 are expressed in primitive mamumalian hematopoietic (pHC) cells but not in marure hematopoietic cells (mHC). This gene is expressed in more mature hematopoietic cells. The protein encoded by this sequence is an example of a receptor pTK and is called fetal liver kinase i (fik-1). fik-1 is expressed in fetal liver.spleen, thymus, brain, stomach, kidney, lung, heart and incestine, and adult brain, kidney, heart, spleen, lung, muscle, marrow and lymph nodes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      3395 CCCGACTCCCTTTGAAGTGGATGGCCCGGAAACCATTTTTGACAGAGTATACACAATTC 3454

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Nucleic acid sequences coding for murine flk-2 and specified subfragments of it are claimed. The murine flk-1 coding sequence (i.e. AQS1504) is also disclosed. The flk polypeptides are receptor protein tyrosine kinases which are expressed only in primitive haematopoletic cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                3455 AGAGCGARGTGTGGTCTTCGGTGTTGCTTGGGAAATATTTTCCTTAGGT 3507

This sequence encodes the murine receptor protein tyrosine kinase (PTK), [1k-1]. This pTK is not in the same family as flk-2 (see also AA404091-15) as it is expressed in primitive hematopoietic cells and also in mature hematopoietic cells. flk-1 is expressed in fetal liver, spleen, thymus, brain, stomach, kidney, lung, heart and intestine and adult brain, bone marrow, kidney, heart, spleen, lung, muscle and lymph nodes.
                                                                                                                                                                                                                                                                                     Totipotent haematopoietic stem cell receptors, their ligands and DNA Sequences - for treating anaemia(s) and bone marrow damage due to e.g. cancer chemotherapy or radiotherapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 5406 BP; 1412 A; 1298 C; 1423 G; 1273 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      misc_feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             misc_feature
                                                                                                                                                                                                                                                regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality) = 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subotone or more than one MI3 subcione; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em. EMBL; Sx.; SWISSPROT: IT: TREMBL; WP: WORMPEP; Information on the WORMPEP database can be found at
                                                                                                                                     together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with a small overlap as described above.
                                      requests: clonerequestésanger.ac.uk
On Aug 9, 2001 this sequence version replaced gi:11715292.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               http://www.sanger.ac.uk/HGP/Chri3
RP11-502P18 is from the library RPCI-11.2 constructed by the group
of Pieter de Jong. For further details see
                                                                                                                                                                                                                             This sequence was finished as follows unless otherwise noted: all
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 13, constructed by the Sanger Centre Chromosome 13 Mapping Group.
